Muhammad Tayyab (Reg# 04072413011)

Use Case ID: UC-T01

Use case: Teacher Uploads Course Material

Input: Teacher uploads the course material (assignments, lectures, resources, marks sheet)

Output: material has been uploaded and available in its selected category. Teacher gets notification about upload.

- **Primary actor:** Teacher
- **Pre-condition:**
    - Teacher has successfully signed into the system.
- **Post-condition:**
    - Teacher receives a notification that files have been uploaded.
    - Uploaded material is available under relevant category.
- **Main Success Scenario:**
    1. Teacher selects the relevant course from list of courses.
    2. System displays course material.
    3. Teacher selects course material category.
    4. System displays previously uploaded material and an “upload” button.
    5. Teacher clicks “upload” button.
    6. System displays the files to select for uploading from computer.
    7. Teacher selects the files and clicks “open” button.
    8. System displays the selected files to preview before uploading.
    9. Teacher selects “confirm” button to confirm uploading.
    10. System makes the uploaded files available under the selected course material category.
- **Alternative Flows:**
    - *3A:* Teacher selects assignment

    1. Teacher sets the deadline of assignment.
    2. Teacher gives specific instructions regarding assignment.

    - *3B:* teacher selects "resources”.
    - *3C:* teacher selects “lectures”
    - 3D: Teacher selects grades.
    - 5A: teacher opens any of the previously uploaded file.

- 6A: teacher selects “cloud storage”.
- 9A: teacher selects cancel button to cancel uploading.
- 10A: system displays error message that files could not be uploaded and previously uploaded material.

The Agile Breakdown

You can slice this single use case into small, incremental user stories for your sprint backlog:

1. The Core Flow

User Story 1(Priority: Medium): *As a teacher, I want to select a course so that I can see course material category related to that course.* (for the point 1 & 2 of use case)

Turning Use Case Steps into Acceptance Criteria

User Story 1:

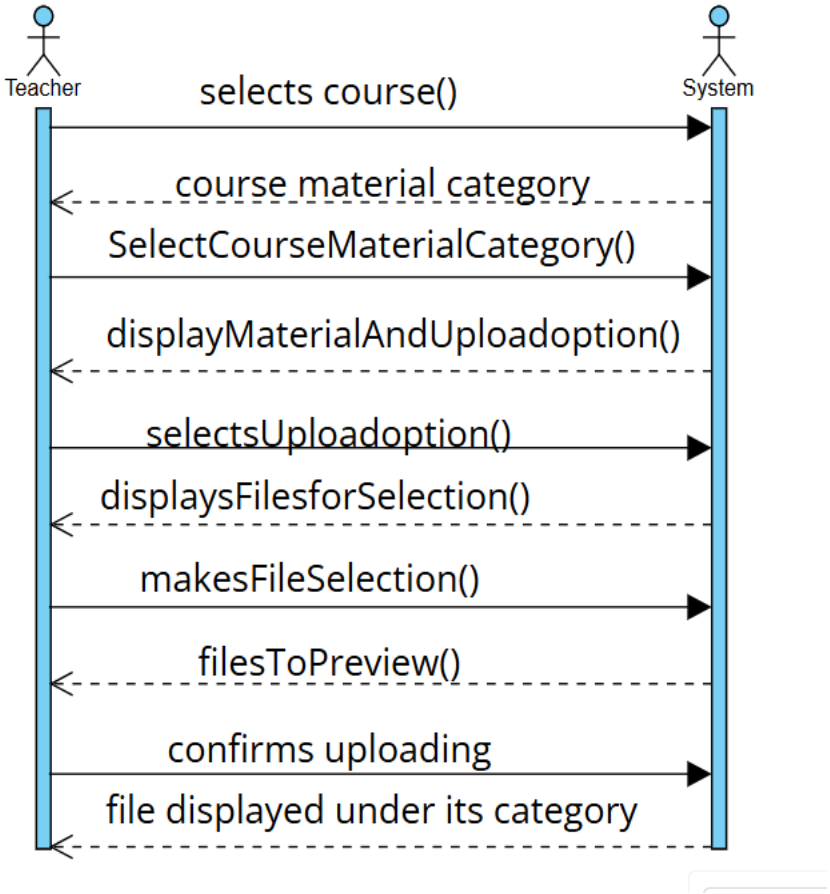

- **Given** a teacher is on the home page of the system.
- **When** teacher selects a course from the list of courses.
- **Then** the system should instantly display course material category related to that course.

Story 2 (Priority: high): *As a teacher, I want to select course material category so that I can see previously uploaded course material and upload option to upload material.* (for point 3 & 4 of use case)

Acceptance Criteria

- **Given** a teacher is on course material category screen.
- **When** teacher selects a course material category.
- **Then** the system should instantly display material uploaded related to that category and an upload material option.

The Use Case: "Provide Feedback"

Use case ID: UC-T02

- **Actor: Teacher**
- **Pre-condition:**

1. The teacher has successfully logged into the system.

2. The student has submitted the assignment.

- **Post-condition:**

1. The comments and grade assigned to students by the teacher are saved.

2. The student should be able to view the feedback provided by the teacher.

- **Main Success Scenario:**

1. Teacher selects the relevant course.

2. He/she selects the “assignment”.

3. Teacher views the submissions.

4. Teacher clicks on a particular student’s assignment to view it.

5. Teacher leaves the comments and assigns grades/points for that assignment.

6. Teacher clicks on the submit feedback.

- Alternative Flows:

1A: Teacher can select another course.

3A: Teacher can review the previous assignments.

4A: Teacher can select another student’s assignment.

5A.0: Teacher can choose not to leave comments or grades.

5A.1: Teacher can choose to leave either comment or grade.

- Exception Flows:

E 1: The submission by the student cannot be loaded so the system displays the error message.

E 2: The teacher is unable to save the feedback.

The Agile Breakdown

You can slice this single use case into small, incremental user stories for your sprint backlog:

The Core Flow

- User Story 1: As a teacher I should be able to view all the submissions made by the students for a particular assignment so I can review them.
- User Story 2: As a teacher I should be able to leave comments and grades so that students can receive the feedback.

Turning Use Case Steps into Acceptance Criteria

The details in your use case directly dictate the Acceptance Criteria (Given-When-Then) of your user stories.

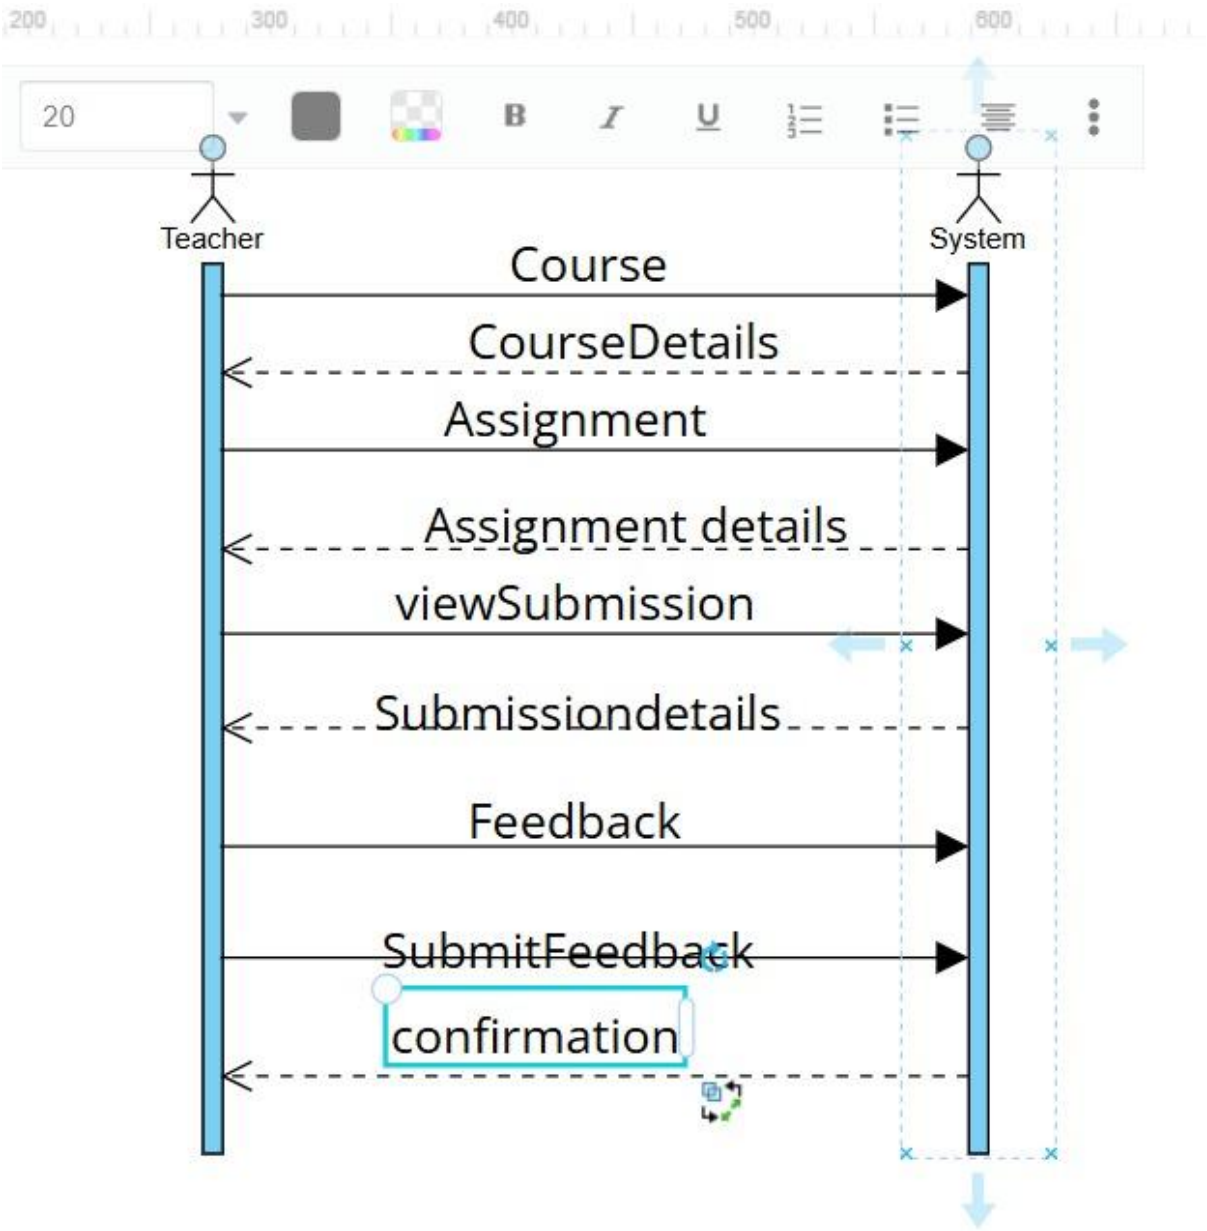

For User Story 1:

- Given: The teacher has login and selected the relevant course.
- When: The teacher clicks on the assignment to view them.
- Then: The submitted assignments should be displayed with student information.

For User Story 2:

- Given: The teacher has selected a particular assignment of a student.
- When: The teacher assigns the grades and submits the feedback.
- Then: The grades should be available for the student to view it.

Use Case ID: UC-T03

Use case: Upload Assignment

- **Primary actor:** Student
- **Pre-condition:**
  - Student has successfully signed into the system.
  - Student is already enrolled and added in the course.
  - Assignment is already posted by the teacher.
- **Post-condition:**
  - The assignment file submitted by the student is saved in the system and it is visible to the teacher.
  - Student receives a confirmation message "Submitted".
- **Main Success Scenario:**
  1. Student selects the relevant course from the list of courses.
  2. System displays the course materials (assignments, grads, resources, lectures).
  3. Student clicks on "Assignments" button.
  4. System displays the list of previous and new assignments uploaded by teacher.
  5. Student selects the desired assignment to submit.
  6. System displays the assignment details (instructions about assignment, deadline, allowed file types) with an “Upload” button.
  7. Student clicks "Upload" and selects the file from the device.
  8. System checks the file type and size and shows the file name for preview.
  9. Student clicks on "Submit".
  10. System stores the file, marks the status as "Submitted" then displays a confirmation message with it’s submitted date and time.
- **Alternative Flows:**
  - 7A: Student writes an optional comment for the teacher.
  - 7B: Student selects the file from cloud storage.
  - 9A: Student clicks on "Cancel" button, system does not save the file and returns backs to the assignment page.
  - 10A: Before the deadline Student clicks on "Replace file" and submits a new file, system replaces the old one with new one.
- **Exception Flows:**
  - 6E1: System disables the upload button when the Deadline has passed, (or marks the work "Late" if allowed by the teacher).
  - 10E2: Internet connection is weak while uploading the assignment, system displays an error message that nothing was saved and shows a message to the student to try again.

1.The Core Flow:

- **User Story 1:** *As a student, I want to select my course from the list of courses so that I can see the related sections of that specific course (assignments, grades, resources, lectures).* (for points 1 & 2 of use case).
- **Story 2:** *As a student, I want to select the section of "Assignments" so that I can see the list of all assignments (previous and new) with their deadlines.* (for points 3 & 4 of use case).

Turning Use Case Steps into Acceptance Criteria

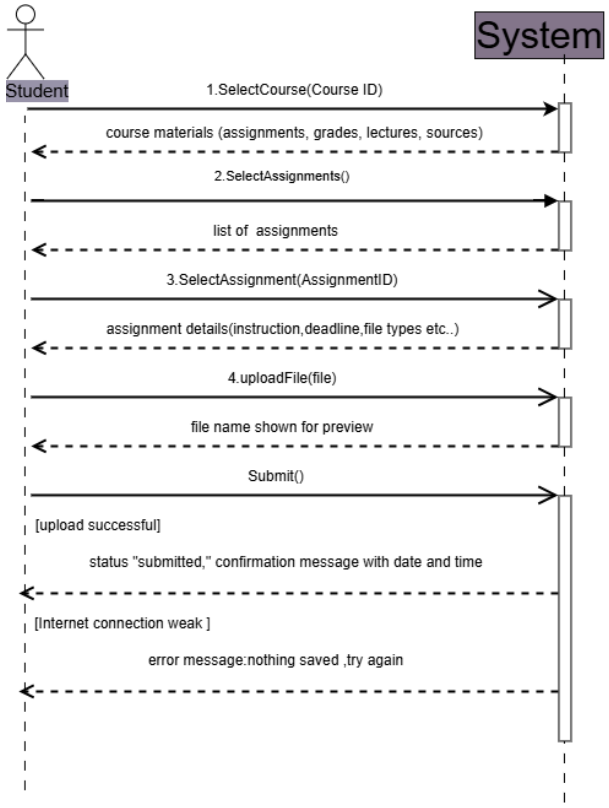

User Story 1:

- **Given** student is signed in and is on the home page of the system.
- **When** student selects a course from the list of courses.
- **Then** system should display the related sections of that course (assignments, grades, resources, lectures),
- **And** only the enrolled courses of student should be shown in the list.

User Story 2:

- **Given** student is on the selected course page and can see its related sections.
- **When** student selects the "Assignments" section.
- **Then** system should display the list of all assignments posted by the teacher.
- **And** each assignment should show its title and deadline.
